

1. A method of retrofitting a reverse osmosis system,
comprising:

rerouting concentrate water, received from a membrane,
from a drain to a water source; and

5 restricting a flow of the concentrate water to the water
source.

2. The method of claim 1, wherein restricting the flow
comprises installing a flow restrictor.

10

3. The method of claim 2, wherein the flow restrictor is
a first flow restrictor having a first flow rating and
installing comprises replacing a second flow restrictor having
a second flow rating with the first flow restrictor, the
15 second flow rating being less than the first flow rating.

4. The method of claim 1, further comprising installing
a pump to pump filtered water from a filter system to the
membrane.

20

5. The method of claim 4, further comprising installing
a pressure switch configured to disengage the pump when

pressure in a tank, receiving permeate water from the membrane, is at a predetermined pressure.

6. The method of claim 4, wherein the predetermined
5 pressure corresponds to the tank being filled with permeate water.

7. The method of claim 1, wherein the water source is a hot water source.
